- Injection Timing:** Governed by the pump's internal mechanisms, ensuring fuel is injected at the correct crankshaft position.

Electronic Control

In advanced Mitsubishi Fuso models equipped with electronic pumps:

- Sensors Monitoring:** Parameters like engine speed, load, temperature, and emissions are constantly monitored.
- ECU Processing:** Data is processed to determine the optimal injection timing and quantity.
- Actuators Adjustment:** Electronic actuators modify pump operation in real-time, enhancing performance and emissions compliance.

Critical Components

- Cam Plate or Rotor:** Determines the timing and volume of fuel delivery.
- Delivery Valves:** Control the flow of fuel into the engine.
- Governor:** Regulates engine speed by adjusting fuel delivery.
- Electronic Control Unit (if applicable):** Manages electronic inputs and outputs.
