physician Hippocrates considered blood one of the four humors, essential for health. Galen of Pergamon further developed humoral theory, asserting that blood, phlegm, black bile, and yellow bile needed balance. Bloodletting became a widespread treatment to restore imbalance, often with detrimental effects. The Renaissance and Early Modern Period William Harvey's groundbreaking work in 1628 demonstrated blood circulation, revolutionizing medical science. This period saw increased interest in dissections and empirical studies. The transition to voluntary unpaid donations in many nations aimed to reduce risks associated with paid donors. The commercialization of blood has also led to black markets, especially in regions with shortages. The Global Blood Industry The development of fractionation techniques allowed the extraction of plasma components like albumin, immunoglobulins, and clotting factors. Major pharmaceutical companies now dominate the plasma-derived medicine market.
