Fundamental for valuing investments, loans, and financial assets. Key calculations include present value (PV), future value (FV), and discounted cash flows (DCF).

- Internal Rate of Return (IRR)** The discount rate that makes the NPV of a project zero. Used as a decision criterion: accept projects with IRR exceeding the required rate of return.
- Cost of Capital** The minimum return that investors require for providing capital. Calculated using the weighted average cost of capital (WACC). Essential for discounting cash flows and evaluating projects.
- Financial Ratios and Metrics**
 - Liquidity Ratios** (e.g., current ratio, quick ratio)
 - Profitability Ratios** (e.g., return on assets, return on equity)
 - Leverage Ratios** (e.g., debt-to-equity ratio)
 - Efficiency Ratios** (e.g., asset turnover)

- Corporate Valuation** Techniques for valuing entire firms or specific assets. Uses market multiples, discounted cash flow models, and precedent transactions.
