This guide delves into the intricacies of G code programming specific to Amada turret punching machines, offering insights into their operation, best practices, and troubleshooting strategies.

Fundamentals of G Code in Turret Punching Machines

What is G Code? G code, or Geometric Code, is a standardized programming language used to control CNC (Computer Numerical Control) machines. It provides instructions for movement, cutting, and tool operations.

Role of G Code in Amada Machines Defines the movement of the punch head across the X and Y axes. Controls the tool selection and change commands. Manages punching sequences, including hole punching, slots, and special features. Coordinates auxiliary functions like sheet movement, marking, or bending.

Key Components of G Code Programming for Amada Turret Punches

Basic G Codes and Their Functions

- G00:** Rapid positioning ? moves the punch head quickly to a specified location without cutting.
- G01:** Linear interpolation ? moves the punch head at a controlled feed rate for punching operations.
- G02/G03:** Circular interpolation ? executes clockwise and counterclockwise arcs, used for curved features.
- G20/G21:** Unit selection ? inches (G20) or millimeters (G21).
- G40:** Tool radius compensation off.
- G41/G42:** Tool radius compensation left/right.
- G43:** Tool length offset.
- G54-G59:** Work coordinate systems.

Specialized G Codes for Amada Punching

Amada machines incorporate

custom or proprietary G codes for specific functions: G70/G71: Pattern repetition. G80: Cancel canned cycle. G81-G89: Canned cycles for repetitive operations (though less common in punching, used for drilling or tapping if integrated). G90/G91: Absolute/incremental positioning.

Programming Strategies for Amada Turret Punching Machines

Switch to controlled feed (G01) for punching operations. Sequence punching points logically, minimizing unnecessary movements. Use canned cycles for repetitive features (e.g., multiple holes). Incorporate tool change commands when switching between different tools.

Sample G Code Sequence for a Simple Part

```

O1000 (Program number)
G21 (Set units to millimeters)
G90 (Absolute positioning)
G54 (Work coordinate system)
M6 T1 (Tool change to tool 1)
M8 (Coolant on)
(Starting position)
G00 X0 Y0
G01 X10 Y0 F100 (Move to first hole position at controlled feed)
G81 R2 Z-5 (Drill cycle at this position)
