The Significance of the Fitzpatrick Skin Type System

The Fitzpatrick skin classification system is fundamental in dermatology for understanding how different skin types react to UV exposure and treatments.

Overview of the Fitzpatrick Skin Types

The system classifies skin into six types based on their response to sun exposure and propensity to burn or tan:

- Type I: Very fair skin, always burns, never tans
- Type II: Fair skin, burns easily, tans minimally
- Type III: Medium skin, sometimes burns, gradually tans
- Type IV: Olive skin, minimally burns, easily tans
