Sample Science ESSA Test Questions

Multiple-Choice Example

Question: Which of the following best explains how increasing the temperature affects the rate of a chemical reaction?

A) The reaction speed decreases. B) The reaction speed remains unchanged. C) The reaction speed increases. D) The reaction stops altogether.

Answer: C) The reaction speed increases.

Explanation: Higher temperatures generally

provide more energy to reactant molecules, increasing the frequency and energy of collisions, which speeds up the reaction.

Constructed-Response Example Question: Describe how the water cycle contributes to maintaining environmental balance. Use specific processes in your explanation.

Sample Answer: The water cycle helps maintain environmental balance by continuously moving water through processes like evaporation, condensation, precipitation, and runoff. Evaporation turns water from oceans, lakes, and rivers into vapor, which rises into the atmosphere. Condensation then forms clouds, and precipitation releases water back to the Earth's surface. This cycle ensures a steady distribution of freshwater, supports plant and animal life, and helps regulate climate, maintaining ecological stability.
